Leaving no one behind
Innovating for Sustainable Development

Robert Metzke
Chief of Staff Innovation & Strategy,
Global Head of Sustainability
Brussels, Nov 15th, 2017
There will be 9bn people living on our planet by 2050
“We can’t go on ignoring inequality, because we have the means to destroy our world but not to escape it”

Professor Stephen Hawking
Our sustainability challenge:
Improving quality of life while respecting the limits of our natural resources

inspired by Global Footprint Network analysis and WWF Living Planet Report
Connected care is key to address the global health challenge

- 480 million patients tracked with our patient monitor
- 238 million Personal Health appliances sold each year
- 101 million people with access to diagnostic X-Ray
- 21 petabytes of imaging study data managed
- 42 million people improved oral health with Philips
An overview of our 2020 Sustainability objectives:

- 95% of Philips’ revenue linked to the UN Sustainable Development Goals
- 90% of operational waste recycled
- 70% of our turnover coming from Green solutions
- Strive for a zero injury and illness work environment
- 100% renewable electricity
- 15% of our turnover coming from circular economy solutions
- 70% of our turnover coming from circular economy solutions
- 15% of our turnover coming from circular economy solutions
Improving people’s lives - metric is accessible to all employees including R&D
Focusing where we can have the most impact
SDG 3
Good health and well-being

Nearly 3 million babies die every year in their first month of life¹

Each year 20 million women experience pregnancy-related illness²

More than 38 million people die each year from Non-Communicable Diseases³

³ http://www.who.int/mediacentre/factsheets/fs355/en/
Strengthening primary healthcare and increasing accessibility
SDG 12
We will need the resources of 3 planets by 2050

Over US $1 trillion a year could be generated by 2025 for the global economy through Circular Economy approaches.\(^1\)

There will be a 55% increase of global energy demand by 2030 putting pressure on achieving global carbon reduction targets.\(^2\)

20% of extracted materials are wasted globally per year (12bn tons).\(^3\)

---

Circular Economy increases access to healthcare
SDG 13
We will be carbon neutral in 2020
Porter/Kramer: Creating Shared Value for society and business

“Capitalism is under siege … The purpose of a business must be redefined around creating shared value (CSV)… How to reinvent capitalism—and unleash a wave of innovation and growth”
“Those who have the privilege to know have the duty to act”

Albert Einstein
